

The following is a highlight of the new improvements and bug fixes available in the latest version of the Viewpoint eDiscovery software platform.

WEB REVIEW

- Dynamic Views are supported in the Web
- Can filter and sort Begin Bates (Production), To, Production Tag Color, Production Tag and Issue Tag columns in Web Documents List
- Selected form now applies to all dashboards and pages
- Improved the speed in which the home dashboard displays in Web after initially logging in
- Improved Web image viewer performance by optimizing request to server
- Improved Web dashboard and file viewing by compressing background Java script files
- Improved performance for viewing large documents in the Web by upgrading the underlying viewer

CLASSIC REVIEW

- 'Display PDFs with Internet Explorer' replaced with 'Use WebView2 as Document Viewer' since IE is being deprecated
- Added the HasNativeFile column to the Documents panel
- Improved handling of unsynchronized image and redaction paths

CONTINUOUS ACTIVE LEARNING (CAL)

- New documents can be added to an existing CAL Process
- Documents skipped during CAL review are added back to the available review population
- Documents tagged outside of a CAL iteration can be included in a CAL iteration and metrics
- Added the ability to check-out complete families in CAL
- Changed CAL check-out quantities to 10, 50 and 100
- Reinstated minified JS to improve some chart and grid performance in CAL

PROCESSING

- Added ability to process and display the data from Microsoft Teams application export
- Maximum file size for data ingested via the Web interface is configurable and no longer capped at 50 MB
- Improved performance for importing large image files

WEB SEARCH

- Custom fields can be searched in Rapid Search
- Keyword lists available from Rapid Search keyword condition
- Ability to copy and paste a list of values to search in Rapid Search
- Disabled Build View and Run in Rapid Search when no source is selected

REPORTING

- Tagging Breakdown Report is formatted to not create extraneous pages
- Updated the report viewer to the latest version of RDCL
- Changed Web export report caption to 'Export to CSV'
- Improved handling of reports that are only available in Classic

SECURITY

- In Security Manager, layout and profile options are now differentiated between Classic and Web
- Add a new "Application" column in Security Manager to distinguish between web vs. classic login

DELIVERY

- Expand clawback feature to include natives, text, and load files
- Added a Delivery Log that specifically tracks delivery actions
- Added new delivery option to automatically slip/placeholder missing files during Numbering option instead of throwing an error
- Added new delivery statuses - Numbering and Delivering - to indicate when a delivery is being actively numbered or delivered on the workers
- Adding a warning when people click "Deliver" button and Numbering is in a warning state
- Improved handling of 'aborted' Delivery status
- Change name of 'replace files' to 'Clawback'
- Allow export of Delivery Log in Viewpoint Web

VIEW MANAGER

- Added a Multi Value button to the Metadata Filter allowing users to search for lists of values

REDACTIONS

- Enhanced automated redaction to include EMS categories and selected entities

OTHER ITEMS OF NOTE

- Replaced FoxIt Reader with Adobe Reader
- Upgrade DevEx for Classic and Web
- Add detailed web authorization error logging
- Updated to the recent version of Log4Net
